

Sentiformer

Here are working examples of our model integrated in one of our webapp,

The SentiScope web application interface is shown in three screenshots, each displaying a different review and its corresponding sentiment analysis results. The application is titled "SentiScope - Sentiment Analysis" and "Sarcasm-aware sentiment lab". The main heading is "Analyze a review" with the subtitle "Classify reviews into 1-5 star ratings with confidence and probability spread."

Example 1: The input text is "Terrible experience. The item arrived broken and customer support was unhelpful." The predicted sentiment is "Very Negative (1 star)" with a confidence of 96.5%. The probability distribution shows 1 star at 96.5% and 2 stars at 3.5%.

Example 2: The input text is "Great food but the service was painfully slow and the place was too loud." The predicted sentiment is "Negative (2 stars)" with a confidence of 50.9%. The probability distribution shows 1 star at 2.8%, 2 stars at 50.9%, and 3 stars at 46.3%.

Example 3: The input text is "The product exceeded my expectations. Fantastic quality and fast delivery!" The predicted sentiment is "Very Positive (5 stars)" with a confidence of 93.6%. The probability distribution shows 1 star at 0.0%, 2 stars at 0.0%, 3 stars at 0.2%, 4 stars at 6.2%, and 5 stars at 93.6%.
